COMPANY PROFILE
In the last decades the concept of healthcare structures has had multiple and rapid transformations. Humanising hospital spaces and medical treatments has become an inescapable priority. Therefore the design of safe functional areas, characterised by certified high quality innovation and at the same time welcoming, intimate and dedicated to every comfort.

From this necessity Casaluci Healthcare was born, a young dynamic business, a leader in the Italian and international market, able to combine craftsmanship, attention to detail, knowledge of materials, architectural quality and quality finishes by innovating process and production and the highest quality design and construction of furniture and prefabricated systems for healthcare.

If the roots are in high range custom-made furniture, in knowledge of exact materials, in a passion for detail, in extreme attention to detail, the present is in healthcare, in tradition which is modern, open to change, gaining knowledge and competence without losing character and strength, always keeping the same customer care, product perfection, versatility and care.

A transit of knowledge in choice and in the manufacturing of raw materials to the design, implementation and certification. Growing wisdom where innovation of process and product is the condition and a guarantee of an excellent final result. Competence, uniqueness, excellence: this is the great and inimitable Made in Italy.
There are no secrets in the materials used by Casaluci Healthcare. Wood, iron, steel, glass, plastic, laminated Corian®: each one has its peculiarity characteristic, its application point and versatility. Project and material, design and technology, tradition and innovation are perfectly integrated to define a unique and inimitable production. Taylor made means exactly this; integrated process and excellent products made to measure guaranteeing the client the best solution.

From the design of the materials to the production, the knowledge and skills are varied and transversal, the process is integrated, of excellence and is unique. A single production chain that designs and implements internally every single segment including supply and installation, with the ability to remodel or modify parts of the structure at anytime to adapt to the needs of the client or environment in which it is located adapting to the client and has the ability to renew in time.

From furnishings and products for hospital departments to prefabricated systems, turnkeys for operation theatres to wiring services, the entire range is characterised by identified products and connote by uniqueness and integrity: the utmost flexibility and the utmost quality. Personalisation is a key word. The integrated cycle, from raw material to design and manufacture and installation, it does not finish with delivery or maintenance but remains guaranteed by a consistency according to the evolution of the needs of the client. Only the exact controls of this cycle allows you to enclose in the heart of this project and its future versatility.
THE ORGANISATION

In middle of the Salento countryside between the ancient olive trees and the sea, Casaluci Healthcare is a bright, modern space of crystal steel and wood. This is where the administrative offices, design team and organisational staff are located not far from here there are two units dedicated to production.

In the middle there is the showroom. This is a large space which exhibits all completed products, prototypes and settings. Welcoming, elegant and refined. Designed and created specifically to demonstrate the company philosophy, harmonised with the particular innovative productive dynamics, verifying the wide range of products and services, to directly integrate with the design and production teams.

Here the designs that made Casaluci Healthcare undisputed leader in turnkey prefabrications for healthcare facilities and operating theatres were born. The TOTEM HYDRA, which was presented at the Shanghai Expo and quickly entered into the vertical beam bed head market for its innovated characteristics, was designed here. TOTEM HYDRA revolutionised beam bed heads in a short time becoming a paradigm also for other brands.

THE NEXTSYSTEM was also designed and developed here. This modular system headwall guarantees advanced solutions for various healthcare environments. This system is an excellent balance between design and technology, it is the only system that is a certified medical device.

SINTESY is our segment dedicated to healthcare structures, operating theatres and critical care units. This is a prefabricated construction and was also designed and developed in this space. Another piece of quality and design imposing Casaluci Healthcare as unique interlocutors able to answer requirements and needs of their clients.

Innovation characterises the entire process, guaranteeing quality and versatility.
The philosophy tailor made is anchored in the history of craftsmanship of the company and it is in this philosophy that Casaluci Healthcare can offer healthcare providers both public and private an excellent service. Tailor made gives a timeless guarantee seeing to the needs of the sector and the market, always producing innovative products.

GIULIANO CASALUCI — Founder
The story starts with him. His passion for beauty, high quality craftsmanship that comes from the knowledge of the materials that characterise the versatility in the products. Still today this is his field of expertise, where knowledge and competence meet with challenges and exploration of the new guaranteeing warmth and space for innovation.

FLAVIO CASALUCI — CEO
The face of Casaluci Healthcare, the interface with external relations, the man who keeps relations between client and market. Trustworthy and polite. The merging of knowledge and communication, of design and production and of client needs which makes Flavio Casaluci the face of Casaluci Healthcare. His knowledge of the healthcare sector, how it evolves and changes, dynamic and complexity is what guarantees that he is able to answer whatever question the client may have.

VALERIO CASALUCI — Engineer
He implores radical change and continuity. Knowledge and skills without interruption, they bind, transmute and transform, expand and decline towards new horizons. His ability to see a project become a realisation, always experimenting and expanding and catering to the needs of the market and the client.
Casaluci Healthcare founds their undisputed competitiveness in the market on the agility of the corporate structure, complete knowledge of the product and their reasoning in application and design. Whether it be single products, locations, prefabricated systems, services or design Casaluci Healthcare promise reliability, modelling and extensibility in responding to market demand and that of the client.

Product design, location design, turnkey design this is Casaluci Healthcare, a unique reality in the Italian and international scene and makes flexibility, adaptability of products, locations and systems possible. The in-house experience Casaluci Healthcare has allows them to respond to any need.
The advanced use of 3D technology allows verification of the entire process, realising production and identifying the most appropriate solution. Products, facilities, healthcare environments designed and manufactured with shrewdness and attention to detail all in-house making it easier to control and test for certification.

A young highly qualified staff, specialised in design and production together with the use of the latest technology all contribute to a production completely Made in Italy. Furthermore it guarantees constant client support, needs and changing environments appropriately intercepted and monitored.

THE NEXTSYSTEM

Is the integrated, versatile and modular system of headwall and wallsystem designed to modernise hospital recovery wards. The excellent technology and sophisticated design offers a functional modular and an easier configuration and implementation of the various elements.

THE NEXTSYSTEM new elements and accessories allow expertise in the functional configuration of critical care environments.

Class IIB medical apparatus compliant to EU Directive 93/42/CEE
THE NEXTSYSTEM enhances the potential of the system for specialised recovery wards. It uses a wide range of modules designed for recovery areas and provides new elements and accessories for a new configuration of headwalls and casework functional for critical care environments, surgeries and emergency rooms.

All elements (bases, shelves and columns) are perfectly compatible with the prefabricated and flexible structure of the headwall. New rational and ergonomic composition are a response to the needs medics and healthcare providers, in particular the management of emergencies and work safety. THE NEXTSYSTEM expertise allows functional organised spaces, avoiding the overlapping of areas and walkways, primary and secondary activities. In addition, the presence of the sanitary modules meet all safety requirements and avoid risk of contamination.

THE NEXTSYSTEM enhances the potential of the system for specialised recovery wards. It uses a wide range of modules designed for recovery areas and provides new elements and accessories for a new configuration of headwalls and casework functional for critical care environments, surgeries and emergency rooms.

All elements (bases, shelves and columns) are perfectly compatible with the prefabricated and flexible structure of the headwall. New rational and ergonomic composition are a response to the needs medics and healthcare providers, in particular the management of emergencies and work safety. THE NEXTSYSTEM expertise allows functional organised spaces, avoiding the overlapping of areas and walkways, primary and secondary activities. In addition, the presence of the sanitary modules meet all safety requirements and avoid risk of contamination.

**FLEXIBILITY**
A medical space that is perfect today will not be perfect in the future. The NEXTSYSTEM is a flexible modular system capable to adapt to changing needs. Its elements are able to be remodelated simply, the utilities are accessible and implementable making for easy substitution in the eventuality of damage.

**MAINTAINABLE**
THE NEXTSYSTEM allows quick access to the wall cavities by simply removing the coverings. Which means fewer interruptions and less downtime.

**ANTIBACTERIAL**
High performance resistant materials with high antibacterial properties. Reliable modules made with overlapping geometries to minimise the penetration of liquids. Antibacterial silicon seals with coplanar surfaces ensure maximum cleanliness.

**RESISTANT**
THE NEXTSYSTEM has been designed and built to meet the needs of healthcare environments, with the best materials on the market, robust and certified in Class 1 fire rating.

**CERTIFIED**
THE NEXTSYSTEM is certified as a medical device Class IIB and complies with EU Directives 93/42/CEE.
A perfect blend of functionality and aesthetics.
The radically integrated and modified design of the obsolete concept of bed head units, guarantees functionality for the new more advanced needs of healthcare environments. A certified integrated private area, unique in its field in two versions, Hydra and Sapzio.

TOTEM HYDRA
Especially designed for hospitals, Totem Hydra is characterised by its wide range of clinically integrated functions. It is a vertical compact piece of furniture. Hydra guarantees medical staff the best freedom of movement and the patients privacy. It perfectly integrates in whatever area: treatment rooms, emergency rooms, surgeries, intensive care and dialysis.

TOTEM SPAZIO
Specialised for clinics and healthcare facilities. It combines elegance and aesthetic care with a wide range of clinical functions. It is particularly versatile, its refined elegant design integrates in any furnishing situation.

Class IIb medical apparatus compliant to EU Directive 93/42/CEE
NXT

A wide range of bedheads for different needs and spaces. Designed and built entirely in-house, perfectly adapted to the needs of care providers and patients, responding in a versatile and adaptable way, personalised to the needs of construction companies and hospitals.
SINTESY

SINTESY, a prefabricated system for operating theatres and is the newest development of Casaluci Healthcare, representing the company’s philosophy and giving it exclusivity on the market place. Casaluci Healthcare offers a complete service starting from the design right through to production and installation and non-stop assistance, on-site or off-site, in order to ensure the best customer support.

The range of solutions and wide range of areas available (operating theatres, pre-op/post-op rooms, scrub, sub-sterilisation and deposits, intensive care) gives made to measure areas catering for every need, able to respond to even the most demanding request, ever increasing hospital equipment, noted for its continuous evolving and upgrading technology.

As in the NEXTSYSTEM the design and materials merge together finding the best solution for every healthcare need. Comfort, security, quality, innovation, technology are the key words of the system demonstrated in its use.
The best guarantee we can give is customer satisfaction. This is what we appreciate the most, optimising design and products to the continual needs and evolution of our customers who continue to appreciate and trust and know they have chosen the best company.
